Education

University of Texas at Dallas **Expected Graduation: Dec 2026**

Bachelor of Science — Computer Science

Technical Skills

Languages: C++, Python, Java, C#, JavaScript, TypeScript, Swift, SQL

Frameworks/Technologies: React, Next.js, .NET, Flask, PostgreSQL, Supabase, AWS, Azure, Kubernetes, CUDA

AI Tools: Git, Cursor, Claude Code, Codex, Vercel, Figma

Work Experience

PayPal **May 2026 - Aug 2026**

Software Engineering Intern *San Jose, CA*

- Built, presented, and deployed 'TerTok', a **Swift iOS** app simulating upstream and downstream PayPal BNPL service endpoints, enabling end-to-end integration testing for the **TikTok Shop** rollout. Used by **15+** team members.
- Contributed to PayPal's **Global Pay Later** integrations across two concurrent merchant partnerships: **Amazon Germany** and **TikTok Shop** using React, **TypeScript**, and **Claude Code**.
- Developed a browser-based dashboard and health-check **API** to monitor real-time status of BNPL services and downstream dependencies, displaying status as (Up / Degraded / Down) with manual override capability, monitored via **Datadog** and deployed on **AWS**.

L3Harris Technologies **Jan 2026 – May 2026**

Software Engineer — Capstone Project - ISR Drone *Richardson, TX*

- Built a **C++/CUDA** signal processing pipeline integrating **4 subsystems** (dual **BladeRF** SDR receivers, GPU-accelerated processing on an **NVIDIA Jetson Orin Nano**) for a UAV-mounted **SIGINT** system, processing I/Q radio data in real time.
- Implemented **IPC** pipe communication between Jetson and **Raspberry Pi** subsystems to stream spectral data to a live web dashboard, updating every **2s** for real-time airborne signal monitoring and visualization on ISR missions.

Ryan LLC **May 2025 – August 2025**

Software Engineering Intern *Dallas, TX*

- Shipped full-stack features to a **10,000+** corporate client user base using **C#**, **.NET**, and **TypeScript**, collaborating with senior engineers to meet business requirements.
- Delivered **20+ Agile** stories and resolved critical production bugs across biweekly releases using **Azure DevOps** pipelines and **CI/CD workflows**.
- Contributed to a 100K+ LOC codebase using object-oriented design and dependency injection, supporting Azure/Kubernetes cloud deployments and CI/CD workflows.

AIMD Club **September 2024 – January 2025**

Officer *UT Dallas*

- Mentored members of **AI in Medical Applications (AIMD)** building health-focused applications, including a **calorie tracker**, **ambulance routing**, and **mental health journal**, while guiding development with **APIs, Git, and React**.

Technical Projects

Re-Mind — AI Reminder App | Re-Mind **React Native — Supabase — AWS Bedrock**

- Designed and shipped an **iOS + Android** mobile app using React Native that lets users create, organize, and search reminders through natural-language chat with an AI assistant.
- Implemented a context-aware **AI agent** using **Amazon Bedrock (Nova)** to parse user messages into structured reminders, schedule tasks, and retrieve past items through semantic search with vector embeddings.
- Developed backend services with **Supabase PostgreSQL**, row-level security, and serverless functions to support real-time syncing, authentication, and persistent user memory.

LinkUp — iMessage App | LinkUp **Swift — Cursor — Supabase**

- Built and shipped to the **App Store** a native **iMessage** extension in **Swift** that lets group chats coordinate availability using interactive poll bubbles with a color-coded heatmap to visualize group overlap.
- Designed a **Supabase PostgreSQL** backend serving as the source of truth for concurrent vote merging, reducing inaccuracies by **75%**.
- Managed the full lifecycle of shipping to the **iOS App Store**, including App Store Connect, TestFlight, and App Review, while driving **80+** installs through direct outreach to students and student organizations.

Short-Form Content Generation Pipeline | @SupermanShorts **Python — n8n — Groq — FFmpeg**

- Engineered an automation that converts Reddit content into **short-form videos** through AI-generated narration, transcription, and video composition.
- Integrated **Groq LLMs**, speech synthesis models, and **FFmpeg** processing workflows to automate script generation, subtitle creation, audio synchronization, and rendering.
- Designed scalable workflow orchestration using n8n, **cloud** storage services, and serverless processing to eliminate manual editing and publishing tasks.

Fantasy Football GameTracker | GameTracker **Next.js — Python — TypeScript**

- Built a full-stack fantasy football tracker with **Next.js and TypeScript**, integrating the Sleeper API and custom web scraping to display live NFL schedules, player data, and fantasy matchups.
- Developed and trained a **machine learning model** in Google Colab using Sci-kit Learn library to analyze game schedules and predict matchups with an **82% success rate**.
